Additional Medical Waste Information

- Soiled bandages, disposable sheets, gloves, IV bags and such should be placed in securely tied plastic bags before you put them in the garbage with your other refuse.

Improperly discarded medical waste can:

- Injure trash haulers & landfill workers
- Contaminate & jeopardize recycling programs
- Can spread disease if reused or shared

How to Safely Dispose of Household Sharps

Safe Disposal of Sharps

- Safe disposal of sharps (needles, syringes, lancets) prevents sharps from being re-used or shared which can spread disease.
- Safe disposal protects children, pets and workers who handle trash & recyclables from injury or illness.
- Safe disposal protects the environment.

Storing Used Sharps

Follow the below guidelines when storing sharps until they can safely be disposed of.

DO-

- Place used Sharps in a sharps container. Containers can be purchased at the local drug store. If you do not have a sharps container use a plastic bottle that cannot be broken or punctured, such as a detergent bottle. Screw cap on & tape cap. Write “SHARPS” on the container. Bring to a designated drop-off location.

- Place sharps in container directly after use. Keep container closed and away from children and pets. Store in a secure location.
- When traveling bring container with you.

DON'T-

- **Don't** put sharps containers in the trash.*
- **Don't** clip, bend or put the cap back on used sharps
- **Don't** put loose used sharps or used sharps container in with the recyclables
- **Don't** put used sharps in soda cans, milk cartons, glass bottles or containers that can be broken or punctured. Coffee cans are not safe because plastic lids come off easily, leak and can be punctured.

*Used sharps containers can be placed in the trash only if access to a drop-off is not available.
